## MOBILE SURVEILLANCE SYSTEMS

We supply special mobile systems for police and state security agencies.

We have more than 20 years of experience with integration of different observation systems in line with end-user demands. Surveillance systems can be integrated into different types of vehicles to meet customer requirements (vans, all-terrain vehicles etc.). We provide special solutions for land and sea observation with long-range thermal cameras, adapted software, nautical radars and complete navigation system – AIS, VTMS.

- More than 20 years of experience
- Unique designs
- Different models
- Satisfied end-users
- For use in different countries
- Quality production

### Authorization for system controls.

Because of their normal appearance they do not stand out from other vehicles. This can provide very significant advantages in special undercover operations.

Observation systems allow police, security or coast guards to control and observe different areas like borders, ports or certain events and help to prevent different crime, increase safety and enable easier observation... The systems are flexible and allow a great variety of activities.

From a 3D design to final product.

Cameras are controlled from a control room with special software which is adjusted to end-user demands and allows:

- Data displayed on the work station screen
- Graphic site maps
- Event screens, Report screens
- Status and Sensitivity change screens
- Manage system events
- Manage video events and alarms
- Changing of the "operational zone" setting such as sensitivities, "Arm/Disarm" status
- Geographic layered display through sensors
- combined georeferenced output
- Password enrolment for access
- authorization to system controls
- Data bank access
- GUI client
